

## Cutting-edge quality for your best performance: Laser cutting made by Zipper-Technik

### We offer both: high-tech and know-how

Whenever you need perfectly cut materials, come to us. We have the equipment you need for your production: a total of four high-performance laser systems offering a multitude of adjustment settings. Thus, each of your projects can be processed tailor-made, precisely, and economically at the same time.

Moreover, we have years of laser cutting experience. That's why you will get the same zero-tolerance quality for each and every workpiece, the same quality we guarantee for our own products. For small-batch series just like for high volume projects. From the first consultation to delivery, we are at your side every step of the way – fast, flexibly, smoothly.

### Numerous possibilities for many materials

With our laser systems, we can work on all non-metal web materials. We cut plastics, woven fabrics, foils, textiles. And we do it perfectly: precise cutting in the millimetre-range, exact contours, and clean edges are a matter of course, since the peculiarities of each material are taken into account, just like your discerning claims to quality.

### We can process these materials for you:

Aramid • Foils • Glass Fabrics • Polyester (PES) • Textiles • Viscose

### The right point of contact for your project
